SCX Business Architecture — The Principal Maintainer Model

> **Internal Reference. Not for publication. Last Updated**: 2026-06-28

Core Principle

The Maintainer is not a CEO. A CEO is accountable to shareholders and can be replaced. The Maintainer is accountable to the protection of equilibrium and cannot be replaced. Any architecture that allows the Maintainer to be removed by external forces destroys the protection of equilibrium.

Three-Layer Structure

```
SCX Foundation (Registered in Switzerland/Singapore, Non-Profit)

   Principal Maintainer (You, lifetime, irrevocable)
        Calibration Anchor: Sole authority to publish global calibration datasets
        Version Numbers: Spring v1.0, v2.0... signed by you
        Interpretive Authority: Authoritative interpretation of theorem boundary c

   SCX Operations Ltd (You 100% ownership, for-profit)
        Yajie API Subscription Fees ($50K-200K/year/client)
        Revenue belongs to company → pays your salary
        No funding. No IPO. Don't sell.

   Academic Advisory Board (Independent, multinational, volunteer)
         Review theorem extensions
         Approve community contributions
         No authority to remove Principal Maintainer
```

Why Not CEO / Chairman

	CEO / Chairman	Principal Maintainer
Accountable to shareholders	Accountable to equilibrium
Can be removed by board	Irremovable (bylaw-locked)
Can take investment	Always sole proprietorship
Can be acquired	Foundation cannot be sold
Power derives from equity	Power derives from arXiv timestamp + M_t

---

Why Foundation in Switzerland/Singapore

- Political neutrality. Not within any major power's sphere of influence.
- Mature legal system. Bylaws are enforceable.
- Other countries cannot easily interfere with operations through diplomatic pressure.
- Benchmarks: SWIFT (Belgium), ICRC (Switzerland), IASB (London).

How Money Flows

```
Client → Pays API Subscription Fee → SCX Operations Ltd
  → Covers servers + bandwidth + your salary
  → Surplus profit used for arXiv maintenance + open dataset hosting
  → Does not pass through Foundation. Foundation raises funds independently.
```

The operations company is your sole proprietorship. No investor can say to you "can we adjust this audit result." You don't need money—you need **the freedom of not being controlled by money**.

Succession

After your death: - Foundation takes over calibration anchor and version numbers - Operations company closes or transitions to community trust - Academic committee selects new technical maintainer (not called Principal

Maintainer) - New maintainer has technical authority, no game-theoretic deterrence authority - System transitions from “Wall-Facer” to “Linus”

A living Principal Maintainer = Wall-Facer. After death, the Foundation = IDAA.

For Reference

- Anytime someone proposes “invest in you”—see the first clause of this document.
- Anytime someone proposes “join the board”—you have no board.
- Anytime someone proposes “we can help manage this”—the Principal Maintainer is irrevocable.
